INTERNSHIP PROJECT – FINAL REVIEW

"LUCKY SUPERMARKET ANALYSIS"

PRESENTED BY:

Lakshana k -710723104075

Area Of Project Work

Data Analytics and Business Intelligence using Microsoft Power BI

This project focuses on transforming raw business data into meaningful insights through interactive dashboards. The project includes data collection, data cleaning, transformation, modeling, DAX calculations, visualization, and report publishing. It enables organizations to analyze business performance and make data-driven decisions.

Objective

- Analyze business datasets using Microsoft Power BI.
- Clean and transform raw data using Power Query.
- Create relationships between multiple datasets.
- Develop DAX measures and calculated columns.
- Design interactive dashboards for business analysis.
- Provide meaningful insights to support decision-making.

Problem Identified

Organizations collect huge amounts of business data from sales, customers, products, and finance. However,

- Raw data is difficult to understand.
- Manual reporting consumes significant time.
- Decision makers cannot quickly identify business trends.
- Static reports do not provide interactive analysis.

Power BI solves these challenges by converting complex data into interactive dashboards with real-time business insights.

Architecture / Workflow

Technologies Used

TECHNOLOGY	PURPOSE
Microsoft Power BI Desktop	Dashboard Development
Power Query	Data Cleaning & Transformation
DAX	Business Calculations
Excel / CSV	Data Source
Power BI Service	Report Publishing
Data Modeling	Table Relationships

Dashboard Modules

Key Features

- Centralized Dashboard Navigation
- Interactive Business Intelligence Interface
- Quick Access to Five Analysis Modules
- User-Friendly Design
- Supports Data-Driven Decision Making

Sales Analysis Dashboard

Key Insights

- Total Sales
- Total Profit
- Total Orders
- Sales by Category
- Quarterly Sales
- Regional Sales Comparison

Product Analysis Dashboard

Analysis Includes

- Top 10 Products
- Bottom 10 Products
- Profit by Category
- Sales by Sub-category
- Product Performance

Regional Analysis Dashboard

Key Metrics

- Region-wise Sales
- Region-wise Profit
- Top States
- Top Cities
- Regional Performance Comparison

Customer Analysis Dashboard

Includes

- Customer Segments
- Top Customers
- Customer-wise Profit
- Customer Details
- Purchase Analysis

Time Analysis Dashboard

Analysis Includes

- Monthly Sales Trend
- Monthly Profit Trend
- Orders by Month
- Sales by Ship Mode
- Time-based Business Analysis

Results

The developed dashboards successfully transformed raw business data into meaningful visual reports.

Results

- Improved data visualization.
- Better understanding of sales and profit trends.
- Easy comparison of regional performance.
- Quick identification of high-performing products.
- Interactive filtering for faster analysis.
- Supports informed business decisions.

Conclusion and Future Scope

The internship improved my practical knowledge of Microsoft Power BI, including data cleaning, modeling, DAX, and dashboard development, while enhancing my analytical skills

Future Scope

- Real-time dashboard integration
- AI-powered analytics
- Predictive analytics
- Cloud-based reporting
- Microsoft Fabric integration
- Azure Data Services
- Machine Learning integration

Thank You
