PROFILE

A passionate and enthusiastic, having a interest in web development, well-versed in Python, Django, HTML, CSS and Java Script. Looking to obtain a responsible position where I can apply my skills and contribute to the growth of a reputable organization.

PROJECTS

Baby Monitoring System

It is a real-time web-based application for detecting baby's action . To develop an intelligent baby monitoring system using AI-based real-time video and audio analysis to alert caregivers when the baby exhibits distress signs or unusual activity. This results in the minimizing the risk of baby falling down cause by playing, rolling can be significantly reduced, making the baby safer and also to detect the baby's action by using EAR and MAR technologies to assists parent and caregivers when a baby woked up and cries. This solution enhances baby monitoring systemand promotes safer and more responsive childcare environments.

2024

Legal Appointment System

Legal Appointment System: Built a Django-based web application to manage client appointments with secure authentication, scheduling features, and admin control. This system sends automated emails to the user and the assigned member whenever the appointment form is filled. this system is to achieve Time-Saving Process, User-Friendly Interface, Accurate Appointment Management, Improved Communication.
